Accessibility

These checks highlight opportunities to improve the accessibility of your web app. Only a subset of accessibility issues can be automatically detected so manual testing is also encouraged.

Names and labels — These are opportunities to improve the semantics of the controls in your application. This may enhance the experience for users of assistive technology, like a screen reader.

- ▲ Links do not have a discernible name

Tables and lists — These are opportunities to improve the experience of reading tabular or list data using assistive technology, like a screen reader.

- ▲ Lists do not contain only `<li>` elements and script supporting elements (`<script>` and `<template>`).
